

AZURE COLLECTION AWARD WINNING TRANSPORTABLE CONCRETE SLAB SYSTEM

Kookaburra Home Solutions is changing the standard of transportable homes across South Australia. The concrete slab transportable option is an evolution in the transportable market, providing a viable alternative to the standard transportable home.

Slabs of transportable homes have traditionally been constructed from timber or steel. The Kookaburra Home's award-winning transportable concrete flooring innovation, the Azure Range, is the only one of its type in South Australia that gives customers the opportunity to have a complete transportable home on a concrete slab.

This unique product can be produced to be as large as a five bedroom home, or as small as a one room granny flat; the choices are endless! The Azure range is ever-popular with customers who do not want the raised look of a traditional transportable home that usually has to incorporate stair access to the front door. It also has the added benefit of greater thermal properties throughout the home, potentially saving you money on electricity bills
